Extending XA to Mobile Devices

Overview

Hexegaon Xalt (formerly Catavolt) provides a secure hybrid cloud solution with all communications with back end systems performed via a satellite server via encrypted and verified connections. XA/System Link provides a natural connector that is already plug & play. (You can also connect to any data source that has a JDBC connector.)

Accelerate your digital transformation. Xalt fast-tracks your ability to harness IoT data and extract its full potential and value.

TriMin has been offering solutions to manufacturing companies for over 30 years. Contact us today to see if we can help you!

What it Does

- Deploy via Tablets, Phones, or Web. Xalt handles all the programming to support this.
- Extends via Enterprise Integrator & System Link to allow you to cloud-enable your custom files.
- User interface is 100% customizable (like Power Link!).
- Data is *always* Encrypted & Secure
- Forms with ERP data, signature capable including ability to imbed pictures/images.
- Rapid Development & Deployment.
- TriMin has pre-built mobile solution shells to get to your ROI quicker and easier.

Our focus is on providing functionally rich solutions and superior customer support. The combination of technical and industry expertise is what sets us apart from many software companies. Many of our tools are in use by dozens of other XA customers and have evolved to extend XA functionality.

Business areas for Mobile
